Page results

URL tested: narfe65.org

Overall

BAD

narfe65.org

It will probably display very poorly on a mobile phone.

Your mobi.readiness score is calculated from the results displayed below. Failing tests and large page sizes both lower the score. Read through the report to understand how to improve your score - and your site.

Readiness, Size, Time & Cost

Test summary

9 Passes 8 Warnings 9 Fails 2 Comments

About this report

Ready.mobi uses industry standard tests developed with the W3C and leading mobility companies.

Ready.mobi provides an analysis of how your web content is likely to function on a mobile device.

Many tests performed by ready.mobi are defined by the W3C in the [MobileOK Basic Tests 1.0](#) document.

Dotmobi compliance tests

(Click name of tests to see more detail in the panel below)

-  [XHTML Mobile Profile](#)  [No frames](#)
-  [Valid Markup](#)

No frames

Your page does not use frames

Do not use frames as many mobile devices do not support them and because they cause a number of usability problems

PASS

MIME types

[help me fix it](#)

Incorrect or missing MIME types were detected

The MIME types sent by servers give very important information to browsers as to how to treat a document. If incorrect MIME types are sent with a document, it may prevent the browser from correctly interpreting the document and failing to render a document.

For XHTML-MP, the recommended MIME type is `application/vnd.wap.xhtml+xml` or `application/xhtml+xml`. Unlike HTML, XHTML-MP should not be served as `text/html`.

Web servers are often set up correctly for common document types such as HTML and CSS, but often do not have the correct doc types for XHTML-MP. Please refer to [mobiForge](#) for instructions on how to set up your MIME types correctly.
