Detailed Description

```
The MailBoxValidator Email Validation Web Services is remotely
hosted, secure and real-time XML Web Service that can be used to
validate email address from three levels of validation, syntax
checking, DNS domain checking, and SMTP checking. This service can
be used to reduce fraudulent email address in online accounts
registration or orders placement. This Web service also proven to
reduce the typing mistakes in the emails for online merchants.
Free monthly account with 90 lookup credits is available for
immediate evaluation. To ensure that this service fill customers
needs 100%, live demo is strongly recommended to users so that they
can experience the service for free prior purchasing. The live demo
is available at http://fraudlabs.com/demoMailBoxValidation.aspx.
