

Exposes the raw SOAP data packet returned by the Web Service after invoking the [callService](#) method.

Syntax

HTML	N/A
Scripting	[objectraw =] <i>object.raw</i>

Possible Values

object	One of the following objects exposed by the WebService behavior. <i>result</i> The result object. This object exposes this property if the error property is false. <i>errorDetail</i> The errorDetail object. This object exposes this property if the error property is true.
raw	An XML fragment that contains the entire SOAP data packet returned by the callService method.

The property is read-only. The property has no default value.

Remarks

Use this property with client-side script to access the raw SOAP data packet (an XML data fragment) that is returned by the Web Service. This property is useful when you require the most detailed information on the results of a method invocation. [Using the WebService Behavior](#) provides code samples and further discussion on this and other related properties.

Applies To

	result , errorDetail , WebService
--	---
