

A property of the [result](#) object that is created at run time.

Syntax

HTML	N/A
Scripting	[resultsValue =] <i>result.value</i>

Possible Values

result	An instance of the result object. This object is created at run time by the WebService behavior after invoking the callService method.
sValue	The value returned by a specific invocation of the callService method.

The property is read-only. The property has no default value.

Remarks

The data type of `result.value` depends on the data type of the returned value of the Web method that was invoked.

Applies To

	result , WebService
